

BERENDS

Delver

“A must in vineyards and orchards”.

DELVER

- * After significant customer enquiry and feedback, the Berends delver was added to our extensive range of machinery.
- * Primarily designed for vineyard use, but useful in a variety of applications.
- * In the vineyard, it is ideal for cleaning the ground between vines and moving soil back onto vine bases.
- * The delver consists of two mouldboards, which are adjustable to suit different row widths. Using the extensions provided it is possible to work to row widths of approx. 3 metres.
- * The 12" furrower on the front is designed to penetrate the ground and the depth can be adjusted by raising or lowering the tractor linkage. The angle of the 'V' drain is adjusted by adjusting the top link.
- * The delver is much more effective if the soil has been cultivated previously and is not compacted.
- * 12 Month Warranty against faulty materials or workmanship.
