

The first post-driver
on the market to
meet the WorkSafe
Industry Safety
Standard 2009

BERENDS Post Driver

**Made in
Australia**

“The safest and best value for money post driver on the market”

Based on simple but strong designs, the post driver runs off a single set of remote hydraulics. No plumbing in the back axle is required. Compared to most brands, the design is almost frictionless resulting in a virtually free-falling weight with a greater “pounding force”. As a result, a lighter weight can be used. Suits a range of post sizes from star pickets to strainer posts.

- Overall weight approx 450kg.
- Overall height 3.9m.
- Requires tractor with one set of hydraulic remotes and 12 volt supply.

160kg dolly weight.

An adjustable sliding clamp is fitted to the main beam to keep post straight when driven

10mm wire cable with stainless steel insert.

Will drive 9'6" post when sitting on the ground.

Removable transport bar for initial pre-delivery.

2 1/2" x 8" ram activates the lever arm which lifts/lowers the dolly.

Protective cage is fitted with micro limit switch which is connected to a solenoid valve to the ram. When the safety cage doors are opened the hydraulic system is shut down. Extremely quick and easy to operate.

Standard with single spool control valve to operate dolly. Model shown with optional sideways tilt fitted to double spool valve. Optional hydraulic top link also available for fore-aft operation.

Ratchet sideways tilt as standard. Model shown with optional hydraulic ram.

Split upper/lower cages allow the unit to be used in existing fence lines.

Operator Manual

Parking stand for uneven ground

Cat 1 & 2 linkage

It is a requirement that all post-drivers meet the design standards set out in the WorkSafe Industry Safety Standard May 2009 edition. Failure to comply can result in the machine being “condemned” by WorkSafe. For more details contact WorkSafe in your state or ask Berends for a copy of the standards.
